Securities and Exchange Board of India (SEBI)

Business Responsibility and Sustainability Reporting (BRSR) Core Framework

Principle 6: Businesses should respect and make efforts to protect and restore the environment.

1. Essential Indicators - Greenhouse Gas Emissions (Scope 1 and Scope 2)

Under Principle 6 of the BRSR format, entities must disclose gross Scope 1 and gross Scope 2 greenhouse gas emissions expressed in metric tonnes of CO_2 equivalent (tCO_2e). Scope 1 emissions encompass direct emissions from owned or controlled sources, such as stationary fuel combustion in backup generators (diesel gensets), boilers, and furnaces, as well as mobile combustion from company-operated vehicles. Scope 2 emissions encompass indirect emissions from the generation of purchased electricity, heat, or steam consumed by the reporting entity.

2. Scope 3 Emissions in Value Chains and Supply Chains

Under leadership indicators, companies are encouraged to map and report Scope 3 upstream and downstream emissions, specifically freight logistics, transportation of raw materials, and supplier operations. For MSME vendors supplying to top listed companies, primary energy and fuel records are requested to substantiate Scope 3 emissions calculations.

3. GHG Emission Intensity Metrics

Disclosures must state emissions intensity per rupee of turnover or physical unit of production output. Data should be substantiated by verifiable bills, utility meter readings, and operational runtime logs. Independent third-party audits are required for top listed firms, while supply-chain outputs support the data these frameworks request.
